IBA Consultants doesn't need any introduction and is already a professional and highly acclaimed group throughout the global plane. The group, along with its professional expertise, ethics and endeavor has created a sensation and has become largely responsible for a wide range of expert services to the construction industry, especially with regard to the problems of buildings. It has been learnt from Mark Baker, President of IBA, that this philosophy or attitude is bearing fruit and the company has bagged two prestigious Miami contracts that include Fairwind Hotel and Mt. Sinai Comprehensive Cancer Center, Greene Pavilion. What will be the obligations of IBA Consultants therefore?

It has been learnt that the project regarding Fairwind Hotel, which is an out and out elegant and five-story, 70 room building located in heart of the architectural district of Miami Beach, will be based on restoration. For that reason the main duty of IBA Consultants will be to provide professional services concerning the glass and glazing, exterior wall, waterproofing, and roofing systems of the entire project.

Now, as far as, Mt. Sinai Comprehensive Cancer Center is concerned, the job will be to provide consultation concerning the project's exterior wall and window replacement components, that include architectural drawing, specification review, shop drawing review and several others.

Speaking on this, Mr Baker said, "Architects and developers around the country first learned of us through our work on significant high-rise developments in South Florida, Tampa Bay and Las Vegas. It wasn't long before they recognized that the cladding, glazing and roofing factors impacting those buildings also impacted their mid-rise construction plans for schools, hospitals, hotels and public use buildings.

"Through this specialization in building exteriors, we were able to provide unique and accurate insight and counsel for projects like the Four Seasons Hotel & Tower, Dolphin Concourse Expansion, Jackson Memorial Hospital and Adrienne Arsht Center of the Performing Arts. Today, we're pleased to add our experience to that of our construction colleagues for these two great projects."
